Computer Systems Engineering Graduate with experience in web development, MySQL databases, and programming in Python, Java, C, and VB.NET. I have participated in distributed systems projects and web applications, with a strong focus on the design and implementation of RESTful APIs using FastAPI and Flask.

Professional Experience

Centro Especializado González

Technician

Tultitlán, México

February 2025 – June 2025

- Performed repair, maintenance, programming, and refurbishment of electrical modules for diesel engines from brands such as Cummins, Volvo, and Detroit.
- Implemented technical procedures to improve efficiency in diagnostics and equipment refurbishment.
- Coordinated activities with the service department to ensure optimal delivery times and equipment functionality.

Final Project – ESCOM, IPN

Full Stack Developer

Mexico City, México

2023 - 2024

- Collaborated with project teammates to develop a web-based chatbot to support students by answering questions related to the academic services department.
- Implemented the bot in Python, integrating back-end (Flask) and front-end (Angular) modules through REST APIs, using Docker containers to isolate and streamline development and deployment.
- Delivered a functional tool that automated student support, significantly improving response times.

Academic Project – Distributed Systems, ESCOM

Web Developer

Mexico City, México

2024

- Designed and developed a cloud-based e-commerce prototype using HTML, CSS, JavaScript, Java, C#, and MySQL.
- Configured project deployment on Microsoft Azure, using Azure Functions for serverless back-end execution and an Azure MySQL instance for data management, ensuring accessibility and system stability.

Education

Escuela Superior de Cómputo (ESCOM) – Instituto Politécnico Nacional (IPN)

Bachelor's Degree in Computer Systems Engineering

Mexico City, México

2019 - 2024

Additional Skills

- Git
- Native Spanish | Intermediate English
